 Gemini Enterprise

AI for Governance

Intelligent. Secure. Human-Centered.
Transforming Government Work.

Secure

Grounded

Human-controlled

Impactful

One Gemini Enterprise Experience.
Multiple Government Roles. Real Impact.

AI is in our DNA

Google Cloud is
the only provider
to offer first-party
solutions across
the entire AI stack.

Agents & Applications

Agent Platform

Agentic Defense

Agentic Data Cloud

Research & Frontier Models

AI Hypercomputer

Model choice

Selecting the right model for your specific tasks and use cases can lead to **huge cost savings with the same results**

Frontier

Premium reasoning built for your most complex, high-value challenges

Gemini Pro, Opus

Workhorse

Balanced performance combining advanced reasoning, speed & cost-efficiency

Gemini Flash, Sonnet

Scale

High-throughput execution optimized to scale foundational agentic tasks

Gemini Flash-Lite,
Haiku

Open weight

Tailored customization providing complete control over the model lifecycle

Gemma, GLM, Kimi

Gemini Enterprise

The front door to AI in the workplace — for everyone.

Your **employees** can expand productivity with an embedded agentic taskforce

Your **developers** can build production-ready AI agents at scale

Customers can discover, purchase, and get help across every touchpoint, without starting over

Google is uniquely prepared for this moment, because we've never stopped innovating

Gemini Enterprise App (AI Frontdoor)

Proprietary + Confidential

The best of Google AI for every Employee. Every Workflow

GEMINI ENTERPRISE APP: AI FRONT DOOR FOR EMPLOYEES & AI AGENTS

A SECURED AND GOVERNED PLATFORM FOR AI INTERACTION & DEPLOYMENT

Our vision for Chhattisgarh

Why this state, why now, and what intelligent governance means in practice

Chhattisgarh as India's Next AI-Driven State

Turning a resource-rich economy into a skill-first, AI-enabled public sector ecosystem.

Why Chhattisgarh?

(Proven Momentum & Institutional Reach)

₹8 lakh crore+ in investment proposals since the Industrial Policy 2024-30, ranked **#1 for Regulatory Ease** (NITI Aayog / CRISIL Investment Friendliness Index 2026).

India's first dedicated AI Data Centre Park (₹1,000 Cr, Nava Raipur), sited alongside the state's first semiconductor assembly unit.

Governance reach across 27 districts and 148 blocks, with Seva Setu delivering 520 services at a **94.3% success rate**.

A completed digital backbone — CG-SWAN and e-District have connected every district and block since 2015, handling 39.75L+ applications since April 2025.

Key Initiatives & Budgets

(Strategic 2026–31 Allocations)

- **Chhattisgarh State AI Mission (₹500 Cr):** 5-year, Cabinet-approved Aug 2026, aligned with IndiaAI Mission.
- **100 AI Data Labs & 5 Centres of Excellence:** statewide research and applied-AI infrastructure.
- **AI Startup Support (300+ startups):** incubation backed by the AI Mission outlay.
- **Skilling (7.5 lakh people):** AI training for 6 lakh students and 1.5 lakh government employees.
- **50+ AI-enabled government services** planned, building on 520 already live on Seva Setu.
- **AI nodal officers mandated** across departments, each owning a department-specific AI roadmap.

*AI Mission targets **100 AI Data Labs and 5 Centres of Excellence** statewide, alongside a first-of-its-kind AI Data Centre Park and semiconductor unit at Nava Raipur.*

From e-Governance to i-Governance

Chhattisgarh has digitised citizen services at real scale — Seva Setu, e-District, CG-SWAN. The question is what happens to the volume now flowing through them, and how the state builds intelligence on top of it.

Vision & Goals

- **Simplify Citizen interactions through AI and Gen AI**
- **Inclusive Governance - Engage Citizens Proactively**
- **Enable Real-Time Decision Making**
- **Unify Governance Across Departments**

AI enabled Government and Citizen Services

Government to Government & Government to Citizen

- **AI enabled search platform** for Government websites & applications
- **AI-enabled Citizen enquiry & grievance** classification system
- **Transportation** Real time bus analytics, Ticketing system - Multimodal

Traffic & Crime

- **AI enabled monitoring and management of traffic, crime**

Geospatial - Agriculture & Environment

- **Geospatial Analytics & AI use cases**- Flood monitoring, Air Pollution, Deforestation
- **Wildlife conservation** - Alert Management of Human Animal conflict
- **Digital Agriculture (Seed to Market)** - Field Segmentation, Crop yield, Farmer Advisory,

Gen AI enabled search bar for Government Websites

Generative summary based semantic search enabled Government web sites

- Common Gen AI enabled search for all govt. websites for citizens to address their frequently asked questions.
- Common Gen AI enabled search bar for government workers to empower them with latest govt. policies, guidelines and best practices
- Limits the search knowledge base to Government websites only

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - LLM, Vector Search, Embeddings and Vector DB
- Use Google translation, STT and TTS services
- Web, iPhone and Android phone supported

AI-enabled Citizen enquiry classification system

Make it simple for citizens to report their grievances and government to direct it to the relevant department

- Simple easy to use interface (Voice-enabled chatbot in native indian language) for citizens
- Grievance classification using trained multi-modal AI model.
- 13 Indian-languages and voice-enabled chatbot
- Hosted on GCP in India
- Uses AI and Gen AI GCP services

Enable Government to direct the citizen enquiries to the relevant government department & line departments

AI Conversational Chatbot and Search for Government Employees

Agentspace - AI Assistant for Government workers to answer their queries related to GO, Policies, Guidelines, etc.

Gen AI enabled chatbot and search for government workers to empower them with latest govt. policies, guidelines and best practices

Limits the knowledge base to Government Orders, Policies and Guidelines document only

Provides Agents for day-to-day work

Uses Gen AI Agentspace service - 1P AI-enabled SaaS

Web, iPhone and Android phone supported

Low-code No-code Agent builder

AI Enabled Tender Evaluation

Reduces time and improves accuracy of bid evaluation process for RFP

- Automated assessment of tender responses based on predefined criteria, such as experience, financial stability, technical, capabilities, and compliance requirements
- Enable faster tender evaluation, reduced administrative burden, and ensuring objective decision-making based on predefined criteria
- Tabulate bidder responses against standard / custom evaluation criteria for easier comparison and evaluation

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - Gemini LLM, Vector Search, Embeddings, Cloud Storage and Vector DB

Simple, fast and audio enabled online form filling for citizen services

- Hosted on GCP IaaS and PaaS services
- Uses Gen AI services - Document AI, Vertex AI, Document OCR, Gemini, Cloud Storage, Google Speech, Google Language Detection, Translation, Vector Search
- Web, iPhone and Android phone supported

Human Animal Conflict Management System

Wildlife conservation, conflict resolution, poaching, and habitat protection

- Integrated Control Room to receive and manage wildlife-related reports, incidents, and inquiries, Improves response time, enhances effectiveness in addressing wildlife issues, real- time monitoring, and fosters collaboration among forest agencies and the public.

How it works in a real-life scenario

Operator receives call, gathers information and forwards it to forest control room, who relays it to FRV. FRV responds and updates call center.

Tiger attacks a child

Gets notices by local who makes a call to the authorities

OR

Or gets captured by our installed cameras

Call operator takes note and passed the information

FRV sent to tackle the incident

FRV reaches in time and handle the situation

Expected outcome

- Ability to manage incidents. Provide compensation due to availability of data and the public (locals)
- Predict man-animal conflicts with availability of sufficient data
- Reduced response time
- Audit trail of the historical data
- Enhanced collaboration among forest officials to trace back all the reported incidents

Human Animal Conflict Management System

The Installation Setup

We have also added a Public Address System – where the announcements are made in local language – Marathi (in this case)

Our proprietary and innovative and first of its kind solution uses a combination of computer vision and artificial intelligence to identify potential animal encroachments

How it Works?

Technical Architecture and Capabilities

- Daily images processed: 10 million images per day
- Monthly data processed: 300 Tb
- Time taken from detection of animal to sending out alerts: 3 seconds
- Google Vision AI / Vertex AI in use

Unified Citizen Data Hub - Golden Records

Benefits for Government

- Use of modern technology to bring benefits to eligible citizens in need.
- More effective targeting of beneficiaries
- Employ accurate planning using unified Citizen database
- Reduce service delivery time to minimum – no need to collect & verify data, develop applications, choose vendors etc. Thus, huge savings on Time and Effort for the Department.
- Accuracy in scrutinizing the applications and finalizing beneficiaries easily
- Monitor the performance of the schemes
- Make considerable savings in money and effort expended by the Government in planning and rollout of new schemes
- Proactive delivery of benefits
- Use authenticated Golden Record as baseline for future IT based solutions. Reduction of fraud, corruption, waste, or abuse of the benefit delivery system.
- Reduction in fund leakages and elimination of wastes occurring during subsidy transfer. Easy consolidation of details of transfers to households that are getting benefits from multiple sources and in multiple forms.

Benefit for Citizens

- Single sign-on functionality through Mobile/ Aadhar / Email/ MahalID (in future) for all Govt. portals and applications. An independent module is to be developed as part of the project. Check (in a single portal) schemes which the citizen is eligible to apply for
- Tracking status of applications
- Reduction in time taken to apply for schemes & services as existing data from all government databases is available beforehand • Services & schemes are proactively availed without cumbersome application process

Google Transportation Sector Offering

Real Time Monitoring

Roads Management Insights

Intelligent Traffic Management

Dynamically manage traffic to proactively reduce congestion, lower travel times, and improve the daily commuter experience.

1. ANALYZE: Get Immediate Situational Awareness

Gain a complete picture of live traffic conditions with up-to-the-minute information on flow, speed, and congestion.

2. IDENTIFY: Detect Unexpected Events in Real-Time

Analyze live data to instantly identify unusual patterns, sudden speed drops, and other anomalies that signal an incident or disruption.

3. ACT: Enable Rapid, Targeted Response

When anomalies are detected, empower traffic managers to respond immediately.

Planning & Investment

1. ANALYZE: Understand Historical Traffic Patterns

Identify recurring trends, peak hours, and daily/weekly flow variations to establish a clear baseline of network behavior.

2. IDENTIFY: Pinpoint Current Problem Areas

Isolate recurring congestion hotspots and inefficient corridors to guide targeted, cost-effective infrastructure improvements.

3. PREDICT: Proactively Manage Future Congestion

Build predictive models to forecast traffic conditions, anticipate bottlenecks, and deploy mitigation measures before they occur.

AI Assistant for Police

Offense Alerts: Receive real-time notifications for any detected offenses

Traffic Violation Alerts: Immediate alerts for traffic violations as they happen

Detailed Identification: Accurately identify vehicles and individuals with detailed appearance descriptions

Crowd Density Monitoring: Analyze and monitor crowd density in near real-time for effective control

Seamless Integration: Easily integrates with existing setups for effortless deployment

Hardware Compatibility: Works with current hardware, requiring no changes to infrastructure

Localized Alerts: Decentralized alerts ensure officers receive updates specific to their area

Predictive Policing: Leverage data to identify crime and traffic trends for proactive action

Transformative Initiatives - Digital Agriculture

Google India

AI Led Farmer's Journey from Seed to Market

Farmers Personal Advisory App

Mobile app on Farmer's smartphone to provide personalized advisory and real-time information

- Crop selection advisory
- Monitor land parcel-wise crop health and soil health condition
- Fertilizer recommendations based on soil profile
- Chatbot in native indian languages to address queries with SMEs
- Provides details about dealers, agro machinery, farm equipments, fertilizers, pesticides, sees in nearby areas.
- Daily alerts and push notifications for weather, crop management, sowing time, and advisories.
- Hosted on GCP in India - IaaS, PaaS services
- Uses GEE for Geospatial analysis services, Vertex AI for AI, Gen AI
- Android and iPhone app

Geospatial AI enabled Agriculture monitoring platform

Web-based decision support system for the government - agriculture department

- Crop acreage maps and statistics at the taluka level
- Crop health - indices-based assessment
- Crop Yield - Satellite and crop model based yield forecasting
- Weather condition monitoring - Area wise weather monitoring and forecasting
- Online reports for crop loss assessment, demand management.
- Land parcel classification using satellite data
- Hosted on GCP in India - IaaS, PaaS services
- Uses Google Earth Engine for Geospatial analysis services

Agricultural landscape understanding

1. High resolution imagery and AI/ML position Google to create these insights as a unique value proposition— unprecedented in the industry.
2. Organize the agricultural information at an individual farm field level.
3. Provide that as a base layer for those in the agri-ecosystem to build their solutions on top of.

DNA RESEARCH

IndusDerma

An AI Derma Copilot optimized for diverse Indian skin tones, powered by MedGemma and MedSigLIP models.

- Fills demographic skin data gap.
- Optimizes accuracy for indian skin.
- Evaluates probable diagnosis probabilities.
- Automates personalized patient care guidelines.
- Built on Google Cloud.

Aarogyam

A Real-time AI triage assistant streamlining patient history gathering, powered by MedGemma and Gemini Native Audio.

- Solves pre-specialist clinical bottlenecks.
- Reduces wait times by 40%.
- Automates patient symptom gathering.
- Generates instant clinical summaries.
- Leverages speech-to-text technology.

Gen AI Use Cases for Competitive Exams

- 1 AI based behaviour detection:** Identify candidates behaviour from entry to exit in the exam room, detection of when does he start and finish paper. Alerts whenever some suspected malpractice is detected.
- 2 AI generates questions :** Based on past question bank & new inputs, AI generates exam questions with similar difficulty level and improve accuracy through training and human in the loop
- 3 Automatic Handwriting Comparison :** AI model to compare the handwriting and throw up if both were written by same person or not e.g. signature matching
- 4 Auto Assessments :** AI based grading and assessment of answer sheets
- 5 Student Assistant :** Multilingual agent / chatbot for student queries and grievance redressal regarding Exams

AI-Driven GST Filing and Discrepancy Detection System

Powered by

Google Cloud

REQUIREMENT UNDERSTANDING

Swipe Next

PROBLEM & CONTEXT

1
Different industries have varying tax rates (IGST, CGST, SGST).

2
Common errors occur in manual GST assessment

3
Current manual verification is time-consuming and prone to mistakes.

METHOD FOLLOWED

1
Automate anomaly detection in GST filings using AI to verify tax compliance.

2
Develop an AI algorithm to validate filed taxes against industry-specific rates.

KEY FEATURES

- **Tax Rate Validation:** Cross-check GST filings with the correct IGST, CGST, and SGST rates.

- **Anomaly Detection:** Automatically flag discrepancies in tax amounts.

- **AI Algorithm:** Continuously updated algorithm based on tax laws for various industries.

- **Automation:** Reduce manual effort and improve filing accuracy.

- **Reporting:** Generate show cause notices highlighting potential errors.

OBJECTIVE

- **Generating** the **discrepancy notice** using **GST data** and the **books** provided.
- **Generating** the **audit report** using the **discrepancy notice**.
- **Search & Summarization** .

DATA SETS

Input Data:

- Discrepancy Notices
- GST Tax Filings: GSTR-1, GSTR-3B, GSTR-2A, GSTR-9, , reply filed by the tax payer
- Financial Documents: Books of accounts, Balance Sheets, Profit and Loss Statements.
- GST Manual and Amendments: Tax laws, amendments, industry-specific tax rates.
- Responses from the taxpayer
- *Other supporting documents*

Output Data:

- Audit Reports
- Highlighted Anomalies
- Discrepancy Reports

INPUT DATA

Sr. No.	Document Type	Description
1	Discrepancy Notice	Identifies GST filing errors, tax law violations, and discrepancies.
2	Audit Notice	Official communication to taxpayers regarding the audit process.
3	Supporting Documents	Includes invoices, financial statements, and taxpayer responses.
4	GST Rule Book	Governing regulations and legal provisions for compliance verification.

The data collected from the discrepancy and audit notices will be utilized to effectively train and generate the AI algorithm.

Subsequently, we will leverage this validated data to develop, refine, and comprehensively evaluate the performance of our AI-driven algorithm.

The audit report will be generated by using the AI algorithm having detailed outputs and insights on the tax discrepancies found.

Key Technology
Partner

SOLUTION APPROACH

Ingesting Document

- Discrepancy Notices
- GST Tax Filings
- Financial Documents
- GST Manual and Amendments
- Responses from the taxpayer
- Other supporting documents

OCR

- OCR of the documents

Splitting into chunks

- Making input-output data into chunks

Embedding

- Creating data embeddings (converting data in dense numerical vector format that captures the meaning of it)

Categorization and storing in vector database

- Embeddings are now stored in vector database.

Passing through LLM model

- Embeddings are passed to LLM models.

Generating Output

- Discrepancy notices are generated.
- Audit reports are generated using Discrepancy notice with taxpayers replies as input
- User can also query on these extracted output.

Google Cloud

Thank you
