Government of Chhattisgarh**

AWS Opportunity – Proposed Engagement Modelⁱ

AWS can explore opportunities to establish a structured engagement framework focused on helping to advance digital and AI skills. The engagement can leverage existing Amazon programs and expertise across cloud technologies, digital transformation and customer-centric innovation. The engagement can be structured around two pillars.

1. Cloud & AI Skilling

As part of the skilling initiative, AWS can offer support that can help state's digital transformation agenda. These initiatives are independently deployable programs covering learners from digital awareness through certification to employment.

Key Offerings:

- i. Self-paced digital literacy platform covering cloud, AI/ML, cybersecurity, and data analytics. Open to anyone aged 18+ with no prerequisites — no AWS account, credit card, or prior technical background needed. It includes simulation-based Guided Labs, soft skills modules, and industry-recognised badges (Credly). It can be deployed across state colleges, ITIs, polytechnics, and government skilling centres via state-specific registration codes. Badge earners gain access to the AWS Emerging Talent Community job board.
- ii. Ready-to-teach cloud curriculum for higher education institutions. It covers Cloud Foundations, Generative AI, Machine Learning, Cloud Security, Cloud Architecting, and Data Engineering (20–60 hrs per course). Faculty are credentialed through the AWS Academy Educator Enablement program. Students and educators get access to the Learner Lab (hands-on AWS environment), 50–100% discounted certification vouchers (Cloud Practitioner, Solutions Architect – Associate), and any other ongoing AWS Academy promotion. It embeds a sustainable train-the-trainer model within institutions. AICTE/UGC/NBA/NAAC-accredited institutions may use AWS Academy to develop and retain educators and produce graduates that are prepared for in-demand cloud careers.
- iii. Cohort based workforce development program for unemployed/underemployed individuals — no prior tech background required. It combines technical training (cloud, networking, security, automation) with integrated soft skills (interview readiness, communication), delivered through Collaborating Organisations (COs) with AWS-certified trainers. Learners receive a free AWS Certified Cloud Practitioner voucher on completion. The program is placement-linked and funded by employers, CSR, or government. It can be activated through state employment exchanges and skill development missions.
- iv. Faculty enablement workshops and advanced skilling cohorts are conducted as in-person sessions, led by AWS Authorised Instructors. For wider reach or scheduling flexibility, select sessions may also be delivered as virtual instructor-led training (vILT).
- v. Access to AWS's digital learning platform with 900+ on-demand courses, hands-on labs, and certification preparation content. This enables continuous learning beyond classroom sessions, at each learner's own pace.

2. GenAI Innovation

AWS powers India's largest citizen-facing platforms. We will partner with state to enable GenAI innovation through the following offerings:

Key Offerings:

- i. AWS will explore a structured engagement, starting with an AI Maturity Assessment to evaluate state readiness, followed by use-case identification and ROI quantification, proof of concept development, production deployment, and citizen-scale rollout across departments.
- ii. AWS will enable access to its GenAI and Agentic AI platform, including 50+ foundation models through Amazon Bedrock, agent development and orchestration tools, and full ML lifecycle infrastructure. AWS will also provide access to eligible credit through various approved programs to offset pilot and development cloud consumption.
- iii. AWS will support sandbox environments for agent development and hackathons for government-focused innovation.

ⁱ **Note: The items outlined in this document are indicative and intended to facilitate discussions. The final scope of collaboration and specific initiatives will be mutually agreed upon by both parties following further discussions and alignment.**
